Gentlemen,

I write this in regard to the usage of your product, SPC-909. After several years of refinishing aircraft with similar products (Napier PMA, Turco 6776, or Eldorado 5044), I have found that your product has repeatedly out performed the competition.

The SPC-909 dwell time has been less than the other products' on all of the demonstrations and side by side comparisons. Some of the advantages and benefits of the SPC-909 compared to the others; relatively odor-free, no negative effects that are common to acid based removers, doesn't dry out-remains wet, therefore less product usage, and makes for a more desirable and less labor intensive clean up around raised fasteners, in addition to not having to make any changes in our waste water recovery/treatment methods.

The competitive pricing, the performance of the SPC-909, and your customer service support team, has made the transition to your product very easy. Feel free to use me as reference as I would be happy to recommend the product to others.

Sincerely,

David Perez  
Exterior Refurbishment Manager  
Wing Aviation.
